MEDICAL DEVICES

OEM Production

OEM Production

Today, in the century when all of the processes in business environment have become global, it is important to be able to meet each demand of our customers with a different variety of products and services.

At Katsan's production facilities, we are proud to provide our partners with one of the most sought-after types of services in the world - OEM production. By this way, our collaborators can have their own brand and put into practice all ideas about new medical device manufacturing without operating, labor and investment costs.

High innovative production site with over 2600 m2 area including an ISO class 8 cleanroom gives us a great opportunity to share our over years experience in medical devices manufacturing with our partners all around the globe.

Katsan's high-performing and well-qualified employees are ready to create the best solutions for each step in contract manufacturing: starting from medical device concept and accomplishing with finished product manufacturing.

OEM production can be made in two ways:

1. Already existing product can be manufactured under your brand name;
2. Our R&D engineers with the help of SOLIDWORKS program will design and develop a completely new medical device based only on your ideas.

So, once you get an idea, just let us know and we will make it come true for you!

Sternum Steel

Suture	Suture Characteristics
Colour	Steel Grey
Raw Material	Stainless steel 316 LVM
Material Type	Monofilament
Absorption	Provides prolonged tensile strength in tissue & presence of infection
Characteristics	High tensile strength, good tissue compliance
Application	In general soft tissue approximation and/or ligation, including use in cardiovascular and orthopedic procedures.
Tensile Strength	High tensile strength.
Knotting Strength	Excellent
Tissue Reaction	Minimal
Sterilisation	Ethylene oxide
Shelf Life	5 years
USP Sizes	10/0 to 7
Packaging	12pcs / 24pcs or 36pcs in one box

Teracel® Original ORC Sterile Haemostat is an absorbable knitted fabric composed by the oxidised regenerated cellulose. **Teracel®** Original ORC Haemostat is white with a pale yellow in color.

Teracel® Original ORC Haemostats used for controlling capillary bleedings and other kinds of bleedings during surgical operations.

Teracel® Original ORC Haemostats provide haemostasis within 2-3 minutes.

Characteristics :

- Excellent Haemostasis
- Low pH has antimicrobial effect
- Very good handling characteristics
- Does not stick to instruments
- Typically dissolves in 2 weeks
- Bactericidal properties
- Compliance with the requirements of USP
- Plant based product with minimal tissue reaction.
- Do not cause irritation to applied body /tissue.

* **Teracel®** Original ORC Haemostats are sterilized by Gamma irradiation technique

* **Teracel®** Absorbable Haemostat bio-compatible. ISO - 10993 Bio-compatibility results are available to our customers upon request.

AVAILABLE SIZES

DIMENSIONS	MEASURING DATA	
	WEIGHT (cm)	LENGTH (cm)
5 cm x 35 cm	4.0 - 6.0	33.0 - 37.0
10 cm x 20 cm	8.5 - 11.5	18.0 - 11.5
5 cm x 7,5 cm	4.0 - 6.0	6.5 - 9.5
1,25 cm x 5 cm	0.9 - 1.6	4.0 - 6.0

Teramesh® Composite is a partially absorbable knitted mesh. Manufactured from approximately equal parts of absorbable Polyglycolic acid - co - caprolactone - 25 monofilament fiber and non-absorbable polypropylene monofilament fiber. Absorbable part of mesh is homogeneously absorbed in 90-110 days, after absorption of PGCL component, only PP mesh remains and provides maximum patient comfort.

Teramesh® Composite can be use in open surgery and laparoscopic operations.

BEFORE

AFTER

Less Stiff > After partial absorption, lower risk of pain with more soft and pliable mesh.

Minimized foreign body > Lower risk of long-term side effects due to less residual foreign body remained after partial absorbability.

Sufficient strength > Before absorption - rigid enough for easy manipulation After partial absorption - retains sufficient strength for enduring normal abdominal pressure.

* **Teramesh®** composite meshes are sterilized by EO.

* **Teramesh®** Partially Absorbable Mesh is bio-compatible. ISO - 10993 Bio-compatibility results are available to our customers upon request.

PRODUCT FEATURES

STRUCTURE	WEIGHT	PORE SIZE
Monofilament	28~29 g/m2 (after partial absorption)	2~3 mm
